AI-INTEGRATED MARKETING ASSIGNMENT

Course: Marketing Management | Programme: BBA
Assignment Type: Individual | Maximum Marks: 30 | Suggested Duration: 7 Days

Assignment Title
AI-Powered Strategic Marketing Challenge: From Consumer Insight to Marketing Strategy

Case Challenge
You are appointed as an AI-Enabled Marketing Consultant for a real brand operating in India. Select one established brand and assume that the company wants to increase its market share among a new or under-served customer segment.

Your task is to use AI tools as a strategic marketing assistant and develop a complete marketing strategy supported by AI-generated insights, your own analysis, and evidence from reliable sources.

Part 1 – Market & Consumer Intelligence
Use an AI tool to analyse the selected brand's market. Ask AI to identify major market segments, emerging customer groups, customer needs, changing consumer behaviour, major market trends, unmet customer needs and potential market opportunities.

Minimum Requirement: Use at least 3 different prompts and progressively improve your prompts. Show: Prompt 1 → AI Output → Improved Prompt → Improved Output.

Part 2 – Advanced Segmentation
Develop at least four customer segments using demographic, geographic, psychographic and behavioural variables. Ask AI to identify which segments appear strategically attractive.

Independently analyse the AI suggestion using segment size, growth potential, accessibility, customer need, competition and profitability potential.

Segment	Need	Size	Growth	Competition	Accessibility	Attractiveness
Segment 1						
Segment 2						
Segment 3						
Segment 4						

Explain how the AI analysis influenced—but did not replace—your decision.

Part 3 – AI-Based Customer Persona & Consumer Psychology
Create two contrasting customer personas using AI. For each persona identify demographics, lifestyle, needs, pain points, purchase motivation, buying barriers, information sources, preferred communication channels and purchase decision factors.

Then ask AI to explain the psychological and behavioural factors that may influence each customer's purchase decision.

Critical Task: Identify three assumptions made by AI about the customer and evaluate whether each assumption is reasonable.

Part 4 – AI-Based Competitive Intelligence

Select three competitors. Use AI to conduct a comparative analysis covering target market, product offering, price positioning, distribution, promotion, brand positioning, digital presence and customer value proposition.

Create a Competitive Positioning Map using two meaningful dimensions. Example: Price ↔ Quality or Mass Market ↔ Premium Market. Explain why the two dimensions were selected.

Part 5 – Value Proposition & Positioning

Use AI to generate three alternative value propositions for the selected brand, such as functional value, emotional value and social value.

Critically evaluate all three and develop your own final value proposition.

Final output should contain: Target Customer + Customer Problem + Brand Solution + Key Benefit + Differentiation. Then develop a Positioning Statement.

Part 6 – AI-Based Marketing Mix Strategy

Develop a complete 7P Marketing Mix using AI support: Product, Price, Place, Promotion, People, Process and Physical Evidence.

7P	AI Recommendation	Student Evaluation	Final Strategy
Product			
Price			
Place			
Promotion			
People			
Process			
Physical Evidence			

For every P: (1) ask AI for recommendations, (2) evaluate the recommendations, and (3) modify the recommendation based on your own analysis.

Part 7 – AI Campaign Development

Develop a complete marketing campaign using AI. Include: campaign objective, campaign theme, tagline, social media strategy for Instagram/LinkedIn/YouTube, one 30-second advertisement script, call-to-action, influencer strategy and hashtag strategy.

Generate five AI-based tagline alternatives and justify your final selection.

Part 8 – AI Image/Creative Generation
Use an AI image-generation tool to create one promotional creative for your campaign. The creative should communicate the target audience, brand message, campaign theme and product/service benefit.

1. AI prompt used
2. Generated creative
3. Revised prompt
4. Improved creative
5. Explanation of what changed and why

Part 9 – AI-Based Marketing Scenario Analysis
Create three hypothetical situations: (A) Competitor reduces its price by 20%; (B) Consumer demand decreases by 15%; (C) A new digital competitor enters the market.

Scenario	AI Recommendation	Critical Evaluation	Final Student Response
Price reduction			
Demand decline			
New competitor			

Ask AI to recommend a marketing response to each situation, then develop your own strategic response.

Part 10 – AI Hallucination & Fact-Checking Challenge
Ask AI for 10 factual statements about the selected brand or its market. Verify each statement using reliable sources.

AI Statement	Verified?	Source	Correction Required?
1			
2			
3			
4			
5			
6			
7			
8			
9			
10			

Identify incorrect information, unsupported claims, outdated information and over-generalised statements.

Part 11 – Prompt Engineering Challenge
Demonstrate the difference between a basic prompt and an advanced prompt.

Basic Prompt: “Give me a marketing strategy for Nike.”

Advanced Prompt: Design your own detailed prompt specifying role, context, target customer, marketing objective, market, constraints, expected output and evaluation criteria.

Compare both outputs and explain how prompt quality affected the quality and usefulness of the AI response.

Part 12 – Final Strategic Recommendation
Prepare a one-page AI-supported Marketing Strategy containing:

- Target Market – Who should the company target?
- Customer Problem – What problem should the company solve?
- Value Proposition – What unique value should the brand provide?
- Positioning – How should the brand be positioned?
- Marketing Strategy – What should the company do?
- AI Contribution – How did AI contribute to the strategy?
- Human Contribution – What decisions required your own judgement?

Part 13 – AI Reflection
Write 500 words answering:

6. Which AI tool was most useful and why?
7. Which AI-generated recommendation was rejected and why?
8. What incorrect or questionable information did AI generate?
9. How did you verify AI-generated information?
10. How did prompt refinement improve the output?
11. What are the risks of depending excessively on AI in marketing?
12. Which parts of the final strategy are based on your own judgement?

AI Evidence Requirements
Students must submit:

- Minimum 10 AI prompts
- AI responses for important stages
- Screenshots of selected AI interactions
- Prompt refinement examples
- AI-generated marketing content
- AI-generated creative
- Fact-checking evidence
- Final modified outputs

AI tools may include ChatGPT, Google Gemini, Microsoft Copilot, Claude, Perplexity, Canva AI, Adobe Firefly or other approved AI tools.

Students must mention the name of every AI tool used.

AI Usage Declaration

I have used _____ for this assignment for marketing analysis, idea generation, content development, scenario analysis and/or creative development. I have critically evaluated and verified the AI-generated information and independently modified the outputs wherever required. I understand that AI-generated information may contain errors, assumptions or outdated information, and I take responsibility for the accuracy and originality of my final submission.

Important Instruction for Students
This is not an assignment where students simply ask AI to "write a marketing strategy."

The assessment will focus on:

Prompt → AI Output → Evaluation → Verification → Modification → Final Marketing Decision

Students will therefore be evaluated on their marketing knowledge, AI literacy, prompt engineering, critical thinking, fact-checking and strategic decision-making, rather than on the amount of AI-generated content.
